## General Comment

Hello. I live within 50 miles of this and demand the NRC to expand the public comment window as we were not given ample public notice on this deadline.

This is an outrage as, we, the public, look upon the NRC to protect us from toxic fallout from nuclear waste by requiring companies to uphold the highest safety standards in creating long-term storage for the toxic waste. We expect that the NRC will protect us by requiring SONGS and other nuclear generating stations to store the waste in thick walled canisters that can be monitored and repaired easily to insure not only the public's safety while being stored temporarily but in doing so will make sure that the intact canisters can be moved when a long-term solution for storage becomes available. We call upon the NRC to put public safety first and require SCE to move the waste to higher ground at Camp Pendleton. Please deny So Cal Edison's pending license for the ISFSI at San Onofre and require that the SCE move the waste where it is out of the tsunami zone, away from the freeway, and off of an earthquake fault line!

Thank you for putting public safety before special interests.
