Re: Nine Mile Point Unit 2
Docket No. 50-410

Gentlemen:

As we have discussed with the staff of the Office of Nuclear Reactor Regulation and Administration of Region I, Niagara Mohawk Power Corporation has made a decision to replace the present Nine Mile Point Unit 2 main steam isolation valves with wye pattern globe valves similar to those being utilized at other boiling water reactors. In support of this change, enclosed for Nuclear Regulatory Commission review are forty copies of an Application for Amendment to Operating License, Safety Analysis Report pages affected by the change, and a safety evaluation addressing the design, testing and operation of the new wye pattern main steam isolation valves for Unit 2. The safety evaluation concludes that the change involves no undue risk to the health and safety of the public and also involves no significant hazards consideration.

Niagara Mohawk requests your cooperation in expediting Nuclear Regulatory Commission review of this change. You can be assured that we will cooperate with you fully and that Niagara Mohawk representatives will be available to discuss or meet with Nuclear Regulatory Commission Staff representatives at any time to address this matter.

Very truly yours,

NIAGARA MOHAWK POWER CORPORATION
