

Federal Emergency Management Agency

Washington, D.C. 20472

Mr. Frank J. Congel
Director, Division of Radiation Protection
and Emergency Preparedness
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Congel:

This is to transmit a copy of the Post-Exercise Assessment (PEA) report for the May 16, 1989, full-participation exercise and the November 13, 1989, remedial exercise for the Nine-Mile Point Nuclear Power Station, in Scriba, Oswego County, New York. The report, dated February 19, 1990, was prepared by the staff of Federal Emergency Management Agency (FEMA) Region II and received in FEMA Headquarters on February 26, 1990.

Three deficiencies, several Areas Requiring Corrective Action and several planning issues resulted from the May 16, 1989, exercise. The three deficiencies were corrected in the November 13, 1989, remedial exercise. The New York State Emergency Management Office has also committed to a schedule of corrective action in order to address by June 1, 1990, the planning issues identified during the exercise and others identified as part of the ongoing plan review process. Based on the results of the remedial exercise and the commitments of the State of New York, FEMA considers that offsite radiological emergency preparedness is adequate to provide reasonable assurance that appropriate measures can be taken offsite to protect the health and safety of the public living in the vicinity of the site in the event of a radiological emergency. Therefore, the approval of offsite plans and preparedness granted on February 1, 1985, under 44 CFR 350 will remain in effect.

If you have any questions, please feel free to contact me at 646-2871.

Sincerely,

Dennis H. Kwiatowski

Dennis H. Kwiatowski
