RE:           Nine Mile Point Unit 1  
              Docket No. 50-220  
              DPR-63  
              (TAC No. M85109)

Gentlemen:

Niagara Mohawk Power Corporation hereby transmits revised pages 204, 204a, 207, 225a, and 230 for the proposed Technical Specification amendment dated December 4, 1992. These pages have been revised to add the word "one" to the AOTs (Allowable Out of Service Times) to clarify operator actions in the event of the loss of two instrument channels. This revision will further strengthen the prevention of "Loss of Function" for the Isolation Actuation Instrumentation. The revision to AOTs' wording does not alter the original meaning or intent of the General Electric Licensing Topical Reports or the BWROG Owners' Group clarifications. This revision has been reviewed in accordance with Section 6.5 of the Technical Specification and no changes to the No Significant Hazards Consideration are required.

This change was discussed with the Nine Mile Point Unit 1 Senior Project Manager, Mr. D. Brinkman and Mr. C. Scholten on January 28, 1993.

Should you have any questions or comments on this transmittal, do not hesitate to contact us.

Sincerely,

B. Ralph Sylvia  
Exec. Vice President - Nuclear
