EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)
02 Following a change in condensate demineralizers, the pH of the 'A' steam
03 generator dropped to 8.08. Morpholine additions to both S/G's resored pH
04 to TS limits within the time allowed by TS 3.18.3. Occurrence similar to
05 LER 79-032. No threat to public health or safety existed.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)
10 High condenser tube inleakage resulted in the decision to increase the
11 demin resin loading in order to enhance sodium removal. Because the resins
12 selectively remove ammonia and morpholine before sodium, a drop in pH
13 resulted. Corrective action to prevent recurrence is being evaluated.
