January 2018 Excursion Report Summary, Cameco Resources, North Butte ISR Project, Permit 632

Dear Mr. Rogaczewski:

Power Resources, Inc. d/b/a/ Cameco Resources (Cameco) is submitting the January 2018 Monthly Excursion Report Summary for the North Butte ISR Project. Monitor Well NB2M-060 was confirmed on excursion November 16, 2017, exceeding the UCL's in chloride, alkalinity and conductivity. Verbal notification was made by phone to Luke McMahan, Wyoming Department of Environmental Quality (WDEQ) – Land Quality Division (LQD) District 3, on November 17, 2017, with written notification following in a letter dated November 20, 2017.

Monitor Well NB2M-060 continued to show a decrease in all parameters from the previous report period. The January 9, 2018 sample showed all parameters below the UCL's. It is Cameco's practice to continue weekly sampling until three (3) consecutive weekly samples show concentrations below the UCL's, deeming the well officially off excursion. Excursion control efforts were continued and Monitor Well NB2M-060 was officially off excursion on January 23, 2018. A courtesy email was sent to LQD on January 22, 2018, at which time Monitor Well NB2M-060 was returned to the regular sampling schedule. Sampling data for Monitor Well NB2M-060 is attached.

As stated in the December 2017 Monthly Excursion Report, Permit 632, Section 3.3.7.5 requires that "If an excursion is not controlled within 30 days following confirmation, each effected monitor well will be sampled and analyzed for the parameters in Table OP-10. Additionally, LQD Rules and Regulations Chapter 11, Section 12(d)(i) require that excursion samples be analyzed for antimony, barium, beryllium, conductivity, copper, lead, mercury, nitrate, pH and thallium. The LQD may waive the analysis of specific parameters if, based on historical ground water sampling data, the parameter(s) is not considered likely to occur as a result of ISR activities." A sample was collected from Monitor Well NB2M-060 on December 18, 2017 and analyzed for baseline parameters. Baseline parameters include all of the constituents listed in Table OP-10, the constituents require by Chapter 11, excluding antimony, beryllium and thallium, and in addition, silica, aluminum and nickel. Analytical results were received during the report period and are attached.

Please call Vickie Gitthens at (307) 358-6541 ext. 462 or email at Victoria_Gitthens@cameco.com if you have questions.

Respectfully,

Larry Reimann
Manager, Compliance & Licensing

LR/vg
