DOCKET 50-255 - LICENSE DPR-20 - PALISADES
PLANT - UPDATE OF PROPOSED TECHNICAL
SPECIFICATION CHANGE DATED DECEMBER 18, 1980

On December 18, 1981 Consumers Power Company submitted a Technical Specification Change Request in response to a NRC letter dated July 2, 1980. Since that time additional changes to the sections referenced in that submittal have occurred. Also, numbering errors were found in two of the sections which necessitates an update of our previous submittal. Therefore, the proposed changes presented in this submittal supersede the December 18 submittal. The items that were changed are summarized as follows:

1. Under the heading of "Permissible Bypass Conditions" in Item 13 of Table 3.17.4, the 210°F temperature limit has been changed to 515°F since both subcooling margin monitors operate from 515°F to 615°F only.
2. Note (2) has been added to Table 4.1.3 so that start-ups of the auxiliary feedwater pumps can be kept to a minimum while maintaining a testing program for each starting mode.
3. Item numbers in both Table 3.17.4 and Table 4.1.3 have been renumbered due to duplication resulting from the previous submittal.

Since this is an update of a previous Technical Specification Change Request it is concluded that these changes should be exempt from additional licensing fees specified in 10 CFR 170.22.
