## General Comment

President Tiny Hands, moron extraordinaire, recently unveiled his bottomless ignorance about climate change:

"There is a cooling, and there's a heating. I mean, look, it used to not be climate change, it used to be global warming. That wasn't working too well because it was getting too cold all over the place."

Despite having access to some of the best scientists in the word, President Impeachment Bait seems less informed than your average Internet wingnut troll. Granted these climate "skeptics" are disingenuous and self-contradictory, but at least they realize that it no longer flies to claim that the world is getting colder.

But President Orange Hair is bravely sticking with talking points from a decade ago:

"The ice caps were going to melt, they were going to be gone by now, but now they're setting records. They're at a record level."

And the only things wrong with that are 1) nobody said that BOTH ice caps were going to be gone by now, and 2) both ice caps are at record LOW levels.

Just goes to show that even ignorant buffoons can be president. But hopefully not for long.
