Chris,

It should be -96. It's a typo that seems to have been carried forward as the SAR hasn't been modified much in its history.

I was looking at Chapter 1 of the NPC SAR, and I saw the following statement on page 1-1:

Authorization is sought for shipment of 1,190 pounds (540 kg) of enriched uranium oxides or compounds per package (includes packaging) as a Type A(F)-85, fissile material package per the definitions delineated in 10 CFR §71.4.

Revision 8 of the CoC identified the NPC as a -96 package. Is this a typo or is there some history to this package about which I need to learn?

Please advise.

Thanks, Chris Allen
