**Subject:** Acceptance Review Determination - Millstone Units 2 and 3 - Inservice Testing Program for Pumps, Valves, and Snubbers, Fifth and Fourth 10-Year Interval Updates (EPID: L-2018-LLR-0011 to L-2018-LLR-0022)  
**Date:** Monday, March 19, 2018 6:05:27 AM

---

Wanda,

By letter dated March 1, 2018 (ADAMS Accession No. ML18066A078), Dominion Energy Nuclear Connecticut, Inc. (DENC) submitted the Millstone Power Station, Units 2 and 3 (MPS2 and MPS3) Inservice Testing (IST) Program Update for the Fifth and Fourth 10-year IST intervals, respectively. The submittal included eleven alternative requests to the requirements of the American Society of Mechanical Engineers (ASME) Code for Operation and Maintenance of Nuclear Power Plants (OM Code), for pumps, valves, and snubbers IST for MPS2 and MPS3.

The purpose of this e-mail is to provide the results of the Nuclear Regulatory Commission (NRC) staff's acceptance review of these licensing requests. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the submittal has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed DENC's submittal and concludes that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. You will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

Based on the information provided in your submittal, the NRC staff has estimated that the review of the relief requests will take approximately 550 hours to complete. The NRC staff expects to complete this review by November 2018 (i.e., approximately 9 months). If there are emergent complexities or challenges in our review that would cause changes to the initial forecasted completion date (greater than a month) or significant changes in the forecasted hours (greater than 25%), the reasons for the changes, along with the new estimates, will be communicated during the routine interactions with the assigned project manager. These estimates are based on the NRC staff's initial review of the application and they could change, due to several factors including requests for additional information and unanticipated addition of scope to the review. Additional delay may occur if the submittal is provided to the NRC in advance or in parallel with industry program initiatives or pilot applications.

Please contact me if you have any questions. A copy of this email will be made publicly available in ADAMS.

Thanks,

~~~~~
