Regulatory Docket File

July 3, 1975
L-75-235

Mr. Angelo Giambusso, Director
Division of Reactor Licensing
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Giambusso:

Re: St. Lucie Unit No. 1 - Docket No. 50-335
Environmental Technical Specification Change

Florida Power & Light Company hereby submits for your review three signed originals and 40 copies of revision 3 to the proposed St. Lucie 1 Environmental Technical Specifications.

This revision consists of substituting Section 3.2, Radiological Environmental Monitoring, with the attached revised Section 3.2, pages 3-5 to 3-13g, with Rev. 3 7/3/75 appearing on the lower right-hand corner of each page.

Yours very truly,

Robert E. Uhrig
Robert E. Uhrig
Vice President

REU:nch
Enclosure

cc: Jack R. Newman, Esquire

7268

STATE OF FLORIDA)
) SS
COUNTY OF DADE)

ROBERT E. UHRIG, being first duly sworn, deposes and says:

That he is a Vice President of Florida Power & Light Company, the Applicant herein;

That he has executed the foregoing instrument; that the statements made in this said instrument are true and correct to the best of his knowledge, information and belief; and that he is authorized to execute the instrument on behalf of said Applicant.

Robert E. Uhrig

subscribed and sworn to before me
this 3rd day of July, 1975

Notary Public in and for the County
of Dade, State of Florida MY COMMISSION EXPIRES APRIL 2, 1976
~~BONDED THRU MAYNARD BONDING AGENCY~~

My Commission expires _____

3.2 RADIOLOGICAL ENVIRONMENTAL MONITORING

Objective

The Radiological Environmental Surveillance Program is conducted to measure radiation levels and radioactivity in the environs, and to assist in verifying any projected or anticipated radioactivity release resulting from plant operations which could bring about public exposure to radiation.

Bases

The environmental monitoring program is designed to determine existing radioactivity levels and to detect changes in radiation levels in the air, water and land environment which may be attributed to the operation of the unit. The methods, procedures and techniques developed during the preoperational phase will be utilized to provide background measurements as a basis for distinguishing significant changes in radioactivity in the site environs.

Specifications

- a) Environmental samples shall be collected at designated locations (see Table 3.2-1 and Figures 3.2-1 and 3.2-2). χ/Q values by sector and the annual average χ/Q at standard distances for such sampling locations are given in Tables 3.2-2 and 3.2-3, respectively. Figure 3.2-3 relates the annual average wind speed and annual average χ/Q to population density in each sector with respect to sampling location and the site center.

3.2 RADIOLOGICAL ENVIRONMENTAL MONITORING (continued)

Specifications (continued)

- b) The type samples to be collected, the schedule of sample collection and the analyses to be made on each sample shall be done in the manner described in Table 3.2-4.

- c) The analyses required in this environmental surveillance program shall be completed either by (1) gamma spectroscopy, (2) beta analysis by liquid scintillation counting, or (3) by chemical separation prior to radioactivity analysis. Table 3.2-5 shows how these radioanalysis methods will be applied. Table 3.2-6 shows the detection capabilities of these methods and compares them with the recommended limits of Regulatory Guide 4.8.

- d) This schedule is designed to ensure that changes in the environmental radioactivity can be detected. A continuing review and evaluation of the program will verify the suitability and adequacy of the environmental program.

- e) Recognition is given to the fact the results of the Radiological Environmental Surveillance Program will determine if there are impacts of plant operation on the environment. As such, and when applicable, these results will be summarized, evaluated statistically, and assessed in order to interpret those impacts.

(1) Samples will be taken whenever biologically available.

(2) Frequency definitions follow:

Weekly - Not less than 48 times per annum - interval may vary by 3 days.
 Monthly - Not less than 12 times per annum - interval may vary by 15 days.
 Quarterly - Not less than 4 times per annum - interval may vary by 30 days.
 Semi-annually - Not less than 2 times per annum - interval may vary by 60 days.

(3) "Fading" in TLD's minimized by annealing before analysis.

(4) Random samplings made by either state and/or county health groups.

(5) Semi-annual Census; location and number of dairy herds within 5-mile radius of plant, as determined by County Agricultural Agent.

(6) If Semi-annual Census in (5) above reveals no dairy herds within 5-mile radius of plant, an annual census will be made of gardens 500 ft.², or greater, within a 5-mile radius of the plant, by contacting the County Agricultural Agent. If existing, the closest such garden will be sampled.
