IMPORTANT

To ensure accurate classification of events the following steps should be taken:

1. Review all sections that may apply to the present conditions.
  - ie. For a steam generator tube rupture you would check Sections 1, 2, 3, 6.
2. Ensure that the highest level classification is declared.
3. Once the classification is made and appropriate actions are initiated return to the applicable ECG Sections and review action levels that will require the declaration of a higher level event.
