NRC to Hold Open House to Discuss 2017 Performance of Farley Nuclear Power Plant

Nuclear Regulatory Commission staff will discuss the 2017 safety performance of the Farley nuclear power plant, operated by Southern Nuclear Operating Co., during an open house on April 11 on the third floor of the Houston County Administration Building, 462 North Oates St. in Dothan, Ala. The two-unit Farley plant is located near Columbia, Ala., about 18 miles east of Dothan.

The open house will run from 4-5 p.m., and NRC employees responsible for plant inspections, including the resident inspectors based full-time at the site, will be available to discuss its performance.

The NRC concluded that the Farley plant operated safely during 2017. At the end of the year, all inspection findings and performance indicators were green or of low safety significance. As a result, the two Farley units remain under the NRC's normal level of oversight, which entails thousands of hours of inspection each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or red, commensurate with the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

Inspections are performed by two NRC resident inspectors and inspection specialists from the NRC Region II office in Atlanta.

The [annual assessment letter](#) for the Farley plant, as well as the [notice](#) for the open house, are available on the NRC [website](#). Current performance information for Farley [Unit 1](#) and [Unit 2](#) is also available.
