Gentlemen:

**CORRECTION PAGE FOR RADIOACTIVE EFFLUENT RELEASE REPORT - 24
SALEM GENERATING STATION
DOCKET NOS. 50-272 AND 50-311**

Attached please find the correction page for page 9 of the semi-annual Radioactive Effluent Release Report, RERR-24. The total Iodine-131 (I-131) reported in the first quarter of 1988 from Salem Unit 1 has been overreported due to a calculation error in a computer program used to generate RERR-24. This error also affected the average release rate for the same time period. The corrections are shown on the attached page with a vertical line in the right margin. The computer program used to generate these numbers will be corrected prior to the next RERR in order to prevent reoccurrence.

Should you have any questions regarding this correction, please feel free to contact us.

Sincerely,

S. E. Miltenberger
Vice President and
Chief Nuclear Officer
