Gentlemen:

**REVISED LICENSE AMENDMENT APPLICATION
REVISION TO LCR 88-06
FACILITY OPERATING LICENSE NOS. DPR-70 AND DPR-75
SALEM GENERATING STATION UNITS 1 AND 2
DOCKET NOS. 50-272 AND 50-311**

This letter constitutes a revision to the license amendment application submitted for the Salem Generating Station Units 1 and 2 on February 20, 1991 (LCR 88-06). The subject license amendment proposed changes to address a number of problems related to the existing provisions contained in Sections 3.0 and 4.0 of the Technical Specifications by incorporating the changes endorsed by Generic Letter 87-09. The proposed revisions to LCR 88-06 are discussed in Attachment 1. The revisions do not affect the significant hazards analysis or conclusions contained in the original license amendment application. Attachment 2 includes marked-up Technical Specification pages reflecting the revisions discussed in Attachment 1. The revised pages included in Attachment 2 are intended to replace the corresponding pages contained in the original LCR submitted on February 20, 1991.

In accordance with 10 CFR 50.91(b)(1), a copy of this request has been sent to the State of New Jersey as indicated below.

Should you have any questions or comments on this transmittal, do not hesitate to contact us.

Sincerely,

Affidavit

SALEM GENERATING STATION UNITS 1 AND 2
DOCKET NOS. 50-272 AND 50-311

NLR-N91126

I. Description of Revision

LCR 88-06 is being revised to accomplish the following:

1. The revisions would delete the 3.0.4 exemption for Unit 1 Technical Specification 3.8.3.1. The 3.0.4 exemption for the equivalent Unit 2 Specification was deleted in the original LCR. Unit 1 Specification 3.8.3.1 was added by License Amendment 105 issued December 4, 1989. Since Amendment 105 was not required to be implemented until before startup from the ninth refueling outage, the Amendment was not implemented until April 1991. As a result, Unit 1 Specification 3.8.3.1 was not yet included in the Technical Specifications when LCR 88-06 was submitted on February 20, 1991 and an oversight was made in not including a change to this Specification in LCR 88-06.
2. The revision would correct a number of editorial and typographical errors contained in the original LCR which create inconsistencies between the Generic Letter 87-09 guidance and the submitted changes. The corrections include:
 - a. Changing the "of" to "for" in the sixth line of the Bases for Specification 3.0.3 on Insert Page 3 of 8.
 - b. Deleting the inappropriate "not" in the third line from the bottom of Insert 3 of 8.
 - c. Underlining the phrase "Specifications 4.0.1 through 4.0.5" in the first line of Insert Page 5 of 8.
 - d. Including the word "necessary" in the sixth line in Insert 5 of 8.
 - e. Changing the "purposed" to "purpose" in the third line of the Bases for Specification 4.0.4 on Insert Page 7 of 8.
 - f. Adding commas after the "2" in the second and third lines of the Bases for Specification 4.0.5 on Insert Page 7 of 8.

II. Reason for Revision

The proposed revisions are being submitted to correct the oversight of not submitting a change to Unit 1 Specification 3.8.3.1 in the original LCR and to correct editorial/typographical errors included in the original LCR.

III. Justification for the Revision

Deleting the 3.0.4 exemption for Unit 1 Specification 3.8.3.1 is identical to the change submitted for Unit 2 in the original LCR. The 3.0.4 exemption is no longer necessary due to the changes proposed to Specification 3.0.4. Removal of the exemption is in accordance with the Generic Letter 87-09 guidance.

The editorial changes are intended to correct editorial/typographical errors and make the proposed changes consistent with the Generic Letter 87-09 guidance.

IV. Significant Hazards Consideration Evaluation Impact

In NLR-N90121 dated February 20, 1991, PSE&G concluded that the proposed changes to the Technical Specifications do not involve a significant hazards consideration since the changes (i) do not involve a significant increase in the probability or consequences of an accident previously evaluated, (ii) do not create the possibility of a new or different kind of accident from any accident previously evaluated, and (iii) do not involve a significant reduction in a margin of safety. These conclusions and the basis for making them is unaffected by this revision; the significant hazards analysis submitted in NLR-N90121 remains valid.
