RE: Clarification for amendment request (Mail Control: 602728) submitted to modify device registration NR-1382-D-101E and exempt distribution license 05-35121-01E

Dear Mr. Lowman:

HiViz, LLC would like to submit the following clarification to an amendment request we submitted on 3/27/18. The mail control number for that submission is 602728. The clarification is as follows:

We contend there is no need for additional prototype tests in reference to the proposed adjustment because the material to be used in place of the polymer cover (nylon) for shock absorption purposes (low durometer silicone) has already been used (and initially successfully tested via prototype tests) for the same shock absorption purposes on the other end of the tritium insert (the one facing the lite pipe), as well as surrounding the tritium insert.

If you have any questions, please call me at 307-223-2785 or email me at Joey.Turbeville@hivizsights.com

Sincerely,

Joey Turbeville
General Manager
