Attachments: Biological Evaluation of Impacts to Northern Long-Eared Bat, Whooping Crane, Red Knot, and Black-Footed Ferret for Proposed Marsland Expansion Area ISR Amendment Version 2.0.pdf

Amanda,

Thank you for the feedback. I have revised Table 3 of the biological evaluation to state “may affect, but is not likely to adversely affect” for northern long-eared bat and whooping crane. I've also labeled this as Version 2.0, included a revision date on the cover page, and noted the reason for the revision in the introductory paragraph for clarity/transparency.

Hi Jessie and Briana,

I read through the BE. Very thorough and clearly captures our discussions and your commitments.

There is one minor change that needs to be made. Page 24 - your summary table - please change the effects determination (not likely to adversely affect) to match what your determinations in the leading species paragraphs (may affect, but not likely to adversely affect).

Let me know when the change has been made. While you do that, I will prep your concurrence letter.

Thank you,
Amanda
