Gentlemen:

**TECHNICAL SPECIFICATION BASES CHANGE
SALEM GENERATING STATION UNIT NOS. 1 & 2
DOCKET NOS. 50-272 & 50-311**

Public Service Electric and Gas Company (PSE&G) hereby provides revised Technical Specification Bases pages for specification 3/4.8 Electrical Power Systems. The revised pages were reviewed through the 10CFR50.59 process by SORC and approved by the Station General Manager on October 30, 1995.

The Technical Specification Bases discussion concerning containment penetration conductor overcurrent protective device information has been simplified. The change was made as part of a UFSAR change that removed the containment penetration conductor overcurrent protective device Tables 8.3-4A and 8.3-4B from the UFSAR. This information is now controlled in engineering calculations to which a reference has been added in the UFSAR.

Attachment 1 contains the revised pages for Salem Units 1 and 2. Please incorporate these changes into the Technical Specifications.

Should there be any questions with regard to this submittal, please do not hesitate to contact us.

Sincerely,

Attachment (1)
