General Comment

Science is ever growing, however, it is stunted by economic advantage. IF there was a way to reduce or eliminate radiation while on site, would that not be great? Talk to the folks at Fukushima, I believe they would agree. Why this is not done is NOT because we can't but because it is not as profitable. Therefore we make it look very expensive, dangerous and complicated to everyone will admire those involved for undertaking such a scientifically monumental task.

I am against this for the simple reason that is it unnecessary. There are ways and methods to render all this material harmless but it is the profits that stop it. Also, if you will notice, none of the great CEOs doing this live anywhere near one of their own disposal facilities.

If you are interested in further details, please feel free to contact me, however, my expectations of anyone doing so are low. However, should things go "critical", drop me a line.
