**SUPPLEMENT TO REQUEST FOR LICENSE AMENDMENT
REACTOR COOLANT SYSTEM
SALEM GENERATING STATION UNIT 1
FACILITY OPERATING LICENSE NOS. DPR-70
DOCKET NO. 50-272**

Gentlemen:

By letter dated, October 14, 1997, Public Service Electric and Gas Company (PSE&G) requested a revision to the Technical Specification (TS) for the Salem Generating Station Unit No. 1 (PSE&G reference LR-N970619, NRC TAC M99821).

The proposed change modified the Salem Unit 1 Technical Specification (T.S.) 3.4.6.3 "Primary Coolant System Pressure Isolation Valves Limiting Condition for Operation." The proposed change modified the Pressure Isolation Valve (PIV) Limiting Condition for Operation (LCO), LCO Action Statement (A/S), Surveillance Requirement (SR), and Table 4.4-4 to be consistent with Salem Unit 2.

This letter provides an administrative clarification on the original submittal. Insert C of LR-N970619 left out the phrase " cold leg" from the 11 through 14 SJ55 valves (Safety Injection Accumulators to cold leg). This phrase should have been included in Insert C for consistency. The phrase " cold leg" will be included in the Technical Specification ready pages.
