Gentlemen:

Your letter dated May 31, 1979, transmitted Proposed Technical Specification Change No. 78 to the Office of Nuclear Reactor Regulation (NRR) for review and approval. The application included LOCA-ECCS analysis results to support continued full rated power operation after replacement of steam generators, and requested related changes to the Technical Specifications of License No. DPR-37 for Surry Unit No. 2. Your application was not accompanied by a license amendment fee, pursuant to 10 CFR Part 170, because you consider it a complement to your November 22, 1977 application.

We have been advised by the NRR review staff that this is a separate request from your November 22, 1977 submittal, and, as such, is considered a new application rather than a supplement to the one in November 1977. Therefore, it is subject to the fee requirements of 10 CFR 170.22.

We have determined from a preliminary review of the May 31 application that the requested action falls in amendment fee Class III because it involves consideration of a safety issue. It is requested that the fee of \$4,000 be forwarded promptly to this office. If after the final evaluation of your application is completed it is determined that it was incorrectly classified, you will be refunded any overpayment or billed for any additional amount due.

Sincerely,

Original Signed by
Wm. O. Miller
