Re: Docket IS NRC-2018-0052; Holtec International's HI-STORE CIS Facility
for Spent Nuclear Fuel, Lea County, New Mexico

Dear NRS:

I respectfully submit these scoping comments on the Holtec Environmental Report (ER) which proposes to bring up to 100,000 metric tons of spent fuel, high-level radioactive waste, from nuclear reactors around the country to southeast New Mexico. I submit these comments because I do not consent to New Mexico becoming a national radioactive waste dumping ground. I do not consent to the transport of up to 10,000 canisters of highly radioactive waste through thousands of communities nationwide. I do not consent to the contamination of our lands, aquifers, air and health of plants, wildlife and livestock. I do not consent to endangering present and future generations.

I formally request a 60-day Extension of Time for this Comment Period. The 543-page technical document is too extensive to allow comment in 60 days. We need more time. Thank you for considering the Extension request.

This Holtec Proposal is contrary to current law. Holtec must remove from its Environmental Report copyrights and all redacted material. The ER fails to analyze the impacts of permanent storage. And more alternatives must be analyzed by Holtec.

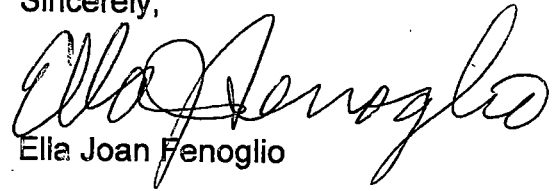

The ER is inadequate for several more reasons: it does not contain an adequate discussion of the transportation risks, of the consequence to an accident-exposed individual, of the cracked and leaking casks, of the seismic impacts on stored casks, of the impact of release from WIPP, and of future railroads and electric lines.

How many of the estimated 135 jobs created by the Holtec Proposal will be given to local residents? How much job training will be provided to those employees?

Thank you for your attention to my comments and for your time and efforts on

this issue so important to New Mexico.

Sincerely,

Ella Joan Fenoglio
