

T.1 TECHNICAL REQUIREMENTS MANUAL

The Technical Requirements Manual (TRM) is a licensee-controlled document that contains certain items removed from the Technical Specifications that do not meet the criteria of 10 CFR 50.36, Technical Specifications. The TRM is incorporated by reference into the FSAR and is therefore subject to the change control requirements of 10 CFR 50.59. Summaries of changes to the TRM are submitted to the NRC on a frequency consistent with 10 CFR 50.71(e) requirements.
