Karen--sorry I did not get this back to you sooner. I spoke to both Dr. Mudge and Dr. Delonga. They had the same feelings as Camp Lejeune. They felt the topics were covered in sufficient depth during their residencies. Much of the in depth science topics are above and beyond what is necessary. The safety/administrative topics are appropriate. Hope this helps. Thanks  
Rick

Training and Experience Evaluation

I realize that this is a very short turnaround, however, if you could look at this questionnaire and let your authorized users read this questionnaire I would appreciate it. Read the email string below. NRC is letting us comment on the training and experience requirements for authorized users under 10 CFR 35.390. If your command has responses please forward them to me by close of business on Thursday April 26 so that I can compile the responses and send to Mr. Seeley at NRC on Friday April 27. Thank you in advance for your diligence.

V/R,

Karen

CAPT Sanders,

Please see the attached documents regarding an evaluation of the training and experience (T&E) requirements in 10 CFR Part 35 by NMSS's medical team. In the Staff Requirements Memorandum, SRM-M170817 (see attached), the Commission directed the staff to evaluate whether it makes sense to establish tailored T&E requirements for different categories of radiopharmaceuticals.

This evaluation is focusing on 10 CFR 35.390, "Training for use of unsealed byproduct material for which a written directive is required." Specifically, the staff is looking at whether the existing alternate pathway requirement of 700 hours (vs. getting certified by a medical specialty board) can be revised for certain categories of radiopharmaceuticals, and still be protective of public health and safety. The staff's response to the SRM is due to the Commission in August 2018.

In response to this SRM, the staff is taking a ground-up approach in determining the categories of radiopharmaceuticals, the appropriate T&E requirements for each category, and whether those requirements should be based on hours of T&E or focused more on competency. The staff is first determining both the fundamental and specific knowledge that is needed to be an authorized user for administering radiopharmaceuticals by developing a list of topics (including some of the topics listed in 10 CFR 35.390).

As part of this effort, the staff is seeking input from various stakeholders to verify that the list of knowledge topics is complete and also get input on how the knowledge should be acquired (hours or competency). These stakeholders include professional medical societies, medical specialty boards, and medical licensees. Attached is a voluntary questionnaire that we are asking for you to send out to your permittees that have authorized users under 10 CFR 35.390 for their input and comments (we would also like your NMCPHC comments as license/permit reviewers). In your response, please do not include any proprietary Information in accordance with 10 CFR 2.390, "Public inspections, exemptions, requests for withholding."

Please return their completed questionnaire to Maryann Ayoade atmaryann.ayoade@nrc.gov <<mailto:maryann.ayoade@nrc.gov>> < Caution-<mailto:maryann.ayoade@nrc.gov> > and Irene Wu atirene.wu@nrc.gov <<mailto:irene.wu@nrc.gov>> < Caution-<mailto:irene.wu@nrc.gov> > byFriday, April 27, 2018. If you have any questions about this questionnaire, please email or call Maryann Ayoade (301-415-0862) or Irene Wu (301-415-1951).

Please let me know if you have any questions. Thank you for your consideration of assisting us with this endeavor.

Thank you,

Shawn
