LICENSEE:
 The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

- 1. Based on the inspection findings, no violations were identified.
- 2. Previous violation(s) closed.
- 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy, to exercise discretion, were satisfied.

 _____ Non-cited violation(s) were discussed involving the following requirement(s):

- 4. During this inspection, certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited in accordance with NRC Enforcement Policy. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11.
 (Violations and Corrective Actions)

Statement of Corrective Actions

I hereby state that, within 30 days, the actions described by me to the Inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

Main Office Inspection Next Inspection Date: 03/28/2019

Field Office Inspection 1 Lexan Lane, Mount Vernon, IN

Temporary Job Site Inspection _____

PROGRAM SCOPE

This was an unannounced, routine inspection of the non-destructive testing division of a large multinational corporation, authorized to use radioactive material for industrial radiography and instrument calibration at its field office on the premises of Sabic International Plastics in Mount Vernon, Indiana, and at temporary job sites in NRC jurisdiction. At the time of the inspection, the licensee had two radiographers and three assistants. The licensee performed a variety of non-destructive testing services for Sabic, but only infrequently performed radiographic testing. All radiographic operations conducted since the previous inspection had been on the premises of the Sabic facility. The license also authorized the possession and use of several gauging devices, however, the licensee had not possessed any material under these authorizations in years.

PERFORMANCE OBSERVATIONS

The inspector toured the field office in Mount Vernon to evaluate the licensee's measures for materials security, hazard communication, and exposure control. The inspector conducted independent surveys and found no exposures to members of the public in excess of regulatory limits. The inspector was unable to observe the conduct of radiographic operations, as none had been scheduled or were in progress at the time of the inspection. Instead, the inspector discussed with the staff the implementation of licensee procedures for the conduct of radiographic operations, instrument and dosimeter calibrations, and oversight of radiographers and assistants through periodic performance observations.

The inspector also reviewed a selection of records, including utilization logs, quarterly equipment maintenance and inventories, sealed source and depleted uranium leak tests, instrument and dosimetry calibration records, shipping and receiving paperwork for sealed sources, radiographer audits, documentation of quarterly safety meetings, and the most recent audit of the radiation safety program.

No violations of NRC requirements were identified as a result of this inspection.
