Attn: Mr. William P. Gammill, Acting	Docket Nos: 50-280
Assistant Director for Operating	50-281
Reactor Projects	50-338
Division of Operating Reactors	50-339
Office of Nuclear Reactor Regulation	License Nos: DPR-32
U. S. Nuclear Regulatory Commission	DPR-37
Washington, D. C. 20555	NPF-4

Dear Mr. Denton:

In response to your letter of October 2, 1979, concerning the Oak Ridge Associated Universities' Radiation Safety course, we find the program, as outlined, acceptable in the respect that it provides the basic indoctrination requirements on radiation safety. However, we find the attached "NRC Radiation Safety Seminar Schedule" inadequate in that it does not fully describe particulars on course content we will require prior to reaching a final determination of acceptance.

The type of information we require is typified by the following questions:

1. Is prenatal exposure (Reg. Guide 8.13) taught in the course?
2. Which methods of radiation protection are taught?
3. Are both gaseous and particulate airborne contamination and the applicable respirator types taught during the "Respiratory Protection" portion of the course?

We would appreciate your submittal of a detailed syllabus to us so that we may reach a resolution of this item.

Very truly yours,

*C. M. Stallings*
