## General Comment

The ongoing and long term radioactivity from the spent fuel from nuclear power plants cannot be deregulated and mixed in with other waste products, When these plants were first constructed the American people were assured that the contents would be carefully contained and HANDLED WITH UTMOST CARE. This cannot be violated now. Transportation through rail and highways risk tremendous consequences. from predictable accidents, Even RARE accidents as in Fukushima, Japan and 3 Mile Island in the United States, may be rare, but the severe consequences are not worth the risk..
