Docket No. 50-280
50-281
License Nos. DPR-32
DPR-37

Gentlemen:

AMENDMENT TO OPERATING LICENSES DPR-32 AND DPR-37
SURRY POWER STATION UNIT NOS. 1 AND 2
PROPOSED TECHNICAL SPECIFICATION CHANGE

Pursuant to 10 CFR 50.90, the Virginia Electric and Power Company requests an amendment, in the form of changes to the Technical Specifications, to Operating Licenses DPR-32 and DPR-37 for the Surry Power Station, Unit Nos. 1 and 2. The proposed change is enclosed.

This proposed change adds a Reactor Vessel Level Coolant Monitor to Tables 3.7-6 and 4.1-2 to meet the requirements of NUREG-0737, Item II.F.2. The monitor provides direct readings of the reactor vessel coolant level. Final installation and calibration are being performed during the present refueling outage for Surry Unit 1. Final installation and calibration for Unit 2 will be performed during the next refueling outage presently scheduled for May, 1983. Final implementation of this system must be coordinated with the implementation of the revised emergency operating procedures prior to issuance of this amendment. The proposed Technical Specification change is provided in Attachment 1. A discussion of the proposed change is provided in Attachment 2.

This request has been reviewed and approved by the Surry Station Nuclear Safety and Operating Committee and the Safety Evaluation and Control Staff. It has been determined that this request does not pose an unreviewed safety question as defined in 10 CFR 50.59.

We have reviewed this request in accordance with the criteria in 10 CFR 170.22. Since this request involves a safety issue which the staff should be able to determine does not involve a significant hazards consideration for Unit 1 and a duplicate safety issue for Unit 2, a Class III license amendment fee and a Class I license amendment fee are required for Unit 1 and Unit 2, respectively. A check in the amount of \$4,400 is enclosed in payment of the required fees.

Very truly yours,

W. L. Stewart
