EVENT DESCRIPTION

02 During surveillance test of volume between CV purge supply valves excessive leakage
 03 was observed from the valve inside CV. Leakage through redundant valve was minimal.
 04 Valve motion was erratic and valve did not close fully each time. Spring cylinder assem-
 05 bly piston shaft was smoothed, polished and dry lubricated. Volume was retested satis-
 06 factorily. Leakage from this and similar valves was reported previously 2/14/74,
 11/19/74, 2/6/76 and 2/9/76. (Reportable Occurrence 76-10, 30-day)

07 SD	E	VALVOP	N	P340	N
7 8 9 10	11	12 17	43	44 47	48

CAUSE DESCRIPTION

08 Excessive friction between the spring cylinder assembly piston shaft and its guide bush-
 09 ing resulted from the shaft being heavily scored. The assembly is to be dismantled and
 10 inspected with the services of a vendor representative (cont'd. under Additional Factors)
