License Nos. DPR-32  
DPR-37

Gentlemen:

VIRGINIA POWER  
SURRY POWER STATION, UNITS 1 AND 2  
GENERIC LETTER 83-28  
SCHEDULE REVISION

As described in our February 8, 1985 revised response to Generic letter 83-28, various items of improvements were planned for completion. A schedule was provided indicating general milestones of April 1, 1985 and July 1, 1985. Some of the items planned for completion remain incomplete and a revision of our February 8, 1985 schedule is necessary. Specifically, the following items are rescheduled for completion:

- Revisions to Station Classification Administrative Procedure

For item 2.2.1, improvements to our classification Administrative Procedure 73 were originally planned for completion by April 1, 1985. These improvements will clarify the use of Safety Related definitions in the classification process. These changes are rescheduled for completion by September 1, 1985.

- Installation of Counters on the DB-50 Breakers

For item 4.2.1, improvements to install counters on the main & bypass Reactor Trip Breakers, which will assist in the maintenance and trending activities, were originally planned for installation by July 1, 1985. Due to material receipt problems, these counters were not installed by July 1, 1985. The counters are now on site and will be installed during the next outage of sufficient duration but not later than the 1986 refueling outages.

• Submittal of our NUTAC Review for the Vendor Interface Program

Certain items under Item 2.2.2 were scheduled for submittal at a milestone date of July 1, 1985. These items involve the completion of our program description for vendor interface. Specifically, submittal of our review of the March 1984 NUTAC as it supports Phase II of a Vendor Interface Program. This review as it relates to the aspects of SEE-IN, NPRDS and Vendor Service will be submitted by September 1, 1985.

Very truly yours,

A handwritten signature in dark ink, appearing to read "W. L. Stewart".

W. L. Stewart
