

SAFETY INSPECTION REPORT AND COMPLIANCE INSPECTION

1. LICENSEE/LOCATION INSPECTED: Snyder & Associates, Inc. 212 North Buchanan Street Maryville, MO 64468 REPORT NUMBER(S) 2018001	2. NRC/REGIONAL OFFICE Region III U. S. Nuclear Regulatory Commission 2443 Warrenville Road, Suite 210 Lisle, IL 60532-4352	
3. DOCKET NUMBER(S) 030-34569	4. LICENSE NUMBER(S) 24-32019-01	5. DATE(S) OF INSPECTION May 18, 2018

LICENSEE:

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

- 1. Based on the inspection findings, no violations were identified.
- 2. Previous violation(s) closed.
- 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy, to exercise discretion, were satisfied.

Non-cited violation(s) were discussed involving the following requirement(s):

- 4. During this inspection, certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited in accordance with NRC Enforcement Policy. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11.
(Violations and Corrective Actions)

Statement of Corrective Actions

I hereby state that, within 30 days, the actions described by me to the Inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

Main Office Inspection Next Inspection Date: 05/18/2023

Field Office Inspection St. Joseph, Missouri

Temporary Job Site Inspection

PROGRAM SCOPE

This was a routine, unannounced inspection of Snyder and Associates, Inc., an NRC licensee that was authorized to use portable moisture/density gauges. The licensee was authorized to store licensed material at two locations in the state of Missouri. The licensee possessed one Troxler model 3440 gauge, and used the gauge 1 - 2 times per month for moisture/density measurements under both private and municipal contracted projects. The licensee had two trained, authorized users and a Radiation Safety Officer (RSO).

PERFORMANCE OBSERVATIONS

At the time of the inspection the gauge was stored at the licensee's St. Joseph, Missouri, address. The inspector interviewed the RSO/authorized user, and toured the portable gauge storage areas at both facilities in St. Joseph and Maryville, Missouri. The inspector reviewed the licensee's utilization logs, and a random sampling of leak test, inventory, and training records. All records were maintained at the Maryville, Missouri, location. Leak testing and analysis, as well as calibration of the gauge, was performed by an independent, licensed company. The inspector observed how the gauge was secured at the St. Joseph location. The RSO demonstrated security of the device at the Maryville address, and during transportation to job sites. No issues were identified with regard to the security of the gauges while in storage, or during transportation.

The inspector performed independent surveys in and around the gauge storage area at the St. Joseph, Missouri, location. Radiation levels ranged from 0.05 mrem/hour - 0.10 mrem/hour.

No violations of NRC requirements were identified.
