General Comment

"one well supported comment is often more influential than a thousand form letters. " Quoting your guidelines the NRC could do a better job at obtaining more public comments if they would make these online campaigns more easily available for the communities like Piketon, Ohio. At this time without enough information I'm against reclassifying Low Level radioactive waste. I would like to see the side by side comparisons in layman's terms so that a normal person could understand what exactly is the right or wrong choice for that individual. I noticed the low number of comments and wonder why with such an important topic. I feel that the true Voice of all Americans will not be heard if you don't ask them. I suggest you update your ways of communicating and targeting of areas that have awareness of Radioactive sites. Facebook lets you target effected areas that would help you gain more comments.
