Docket Nos. 50-280, 50-281
License Nos. DPR-32, DPR-37

Virginia Electric and Power Company
ATTN: Mr. W. L. Stewart, Vice President,
Nuclear Operations
P. O. Box 26666
Richmond, VA 23261

Gentlemen:

SUBJECT: CONFIRMATION OF INSPECTION DATES

This letter confirms February 1-5, 1988, as being the dates selected for a Balance-of-Plant (BOP) inspection to be conducted at the Surry Power Station. The selection of these dates was discussed in a phone conversation on December 14, 1987, between N. Hardwick, Virginia Power, Manager of Nuclear Programs and Licensing, and A. Szczepaniec, U. S. Nuclear Regulatory Commission, Region II.

The inspection team will consist of approximately six inspectors. The inspection will be in accordance with Temporary Instruction (TI) 2515/83. Maintenance, training, quality assurance, design modifications and management support, as they relate to BOP systems, especially the feedwater system, are the areas of major emphasis in this TI.

Please contact our office if there are any questions or comments concerning this special inspection.

Sincerely,

ORIGINAL SIGNED BY
ALAN R. HERDT
