 Docket Nos. 50-280
 50-281
 License Nos. DPR-32
 DPR-37

Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
SURRY POWER STATION UNITS 1 & 2
PROPOSED TECHNICAL SPECIFICATION CHANGE SUPPLEMENT
CONTAINMENT PERSONNEL HATCH

Virginia Electric and Power Company letter, Serial 88-100, dated April 26, 1988 requested a change to the Technical Specifications to allow entry into the containment personnel airlock during power operations to make repairs on the inner door of the personnel airlock. This letter supplements the initial submittal by specifying a time limit for entry under the proposed change.

This change has been reviewed by the Station Nuclear Safety and Operating Committee and the Safety Evaluation and Control staff. It has been determined that the supplemental change is more restrictive and therefore remains bounded by the original submittal's evaluation. Hence, this supplemental change does not involve an unreviewed safety question as defined in 10 CFR 50.59 or a significant hazards consideration as defined in 10 CFR 50.92.

The application fee for this request was previously forwarded with the initial submittal.

Very truly yours,

 D. S. Cruden
