DPR-37

Attention: Mr. John Monroe

Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
SURRY POWER STATION UNITS 1 AND 2
RENEWAL/MODIFICATION OF SRO LICENSE FOR MR. J. PICKWORTH

Per your telephone conversation with H. McCallum of the Training Department on 06/22/88, the following actions are proposed in order to support the renewal and modification of Mr. Pickworth's SRO License to a Limited SRO License - Fuel Handling:

1. A comprehensive written examination will be developed by the Nuclear Training Department and administered to Mr. Pickworth during July 1988. This examination will be multi-hour in length, and encompass the fundamentals, systems, and procedures appropriate for Mr. Pickworth's fuel handling duties and responsibilities;
2. Mr. Pickworth will remain in an inactive license status and therefore not assume Technical Specification SRO responsibilities pending resolution of his license renewal and modification; and,
3. Your office will be notified by telephone and in writing of Mr. Pickworth's performance on the comprehensive examination as soon as possible following exam grading.

An additional concern expressed by your staff dealt with Mr. Pickworth's involvement in licensed activities following his failure of the 1987 Comprehensive Examination. Mr. Pickworth has not been assigned to a Technical Specification licensed position since notification by the Training Department of his unsatisfactory performance on the annual Comprehensive Examination administered on 12/21/87.
