Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
SURRY POWER STATION UNIT 1
REQUEST FOR FLOW ACCELERATED CORROSION (FAC) PROGRAM DATA

In telephone conversations with Drs. G. E. Edison and A. J. Buslik of the NRC, Virginia Electric and Power Company was requested to provide limited technical support for an NRC research project on plant aging. Specifically, we agreed to provide our Surry CHECWORKS-FAC plant databases, which contain information used to assess flow accelerated corrosion in plant piping systems, to Mr. Curtis L. Smith of Idaho National Engineering Laboratory (INEL). We understand that these databases will be used for comparison with INEL research results. It should be noted that the EPRI computer code CHECWORKS-FAC is required to use the databases.

Consistent with discussions with Dr. Buslik, the requested Surry databases have been provided electronically to Mr. Smith at INEL. Although we are available to discuss the information provided, we cannot otherwise actively participate in the NRC plant aging research effort due to other resource intensive engineering activities ongoing at this time.

If you have any questions or require additional information, please contact us.

Very truly yours,

R. F. Saunders

R. F. Saunders
Vice President - Nuclear Engineering and Services

Commitment Summary: No new commitments are intended as a result of this letter.
