Serial No. 88-476A  
NO/ETS:v1h  
Docket Nos. 50-280  
50-281  
License Nos. DPR-32  
DPR-37

Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY  
SURRY POWER STATION UNITS 1 AND 2  
INDIVIDUAL ROD POSITION INDICATION SYSTEM  
SUPPLEMENTAL CHANGES TO  
PROPOSED TECHNICAL SPECIFICATION

Pursuant to 10 CFR 50.90, on August 5, 1988 Virginia Electric and Power Company requested an amendment, in the form of changes to the Technical Specifications, to Operating License Nos. DPR-32 and DPR-37 for Surry Unit Nos. 1 and 2, respectively.

The proposed Technical Specifications change, as supplemented, clarifies the operability requirements of the Individual Rod Position Indicating (IRPI) System during a reactor startup (rod motion to achieve criticality) and power operations. Pages changed due to this supplement to the August 5th submittal are included in Attachment 1. The original changes and the supplemental changes to Technical Specification pages 3.12.-10 and 3.12-11 are identified with bars and double bars in the right margin respectfully. The previously submitted safety evaluation and significant hazards considerations review for the proposed changes remain unchanged and are not resubmitted in this correspondence.

This supplemental change has been reviewed and approved by the Station Nuclear Safety and Operating Committee and by the Safety Evaluation and Control Staff. It has been determined that this request does not alter the original safety analysis and therefore, does not involve an unreviewed safety question as defined in 10 CFR 50.59 or a significant hazards consideration as defined in 10 CFR 50.92.

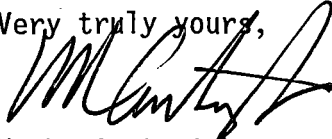

*Adol*  
1/11

Pursuant to 10 CFR 170 an application fee was submitted on August 5, 1988, and therefore, no fee is included with these supplemental changes.

Should you have any questions, please contact us.

Very truly yours,

W. R. Cartwright
