General Comment

Nuclear power is the way of the future. It is the largest and most efficient carbon neutral energy production method we have. The energy that Turkey Point produces will have to come from somewhere. Where do these anti-nuke, I will not call them environmentalists, people think the extra power is going to come from? Solar? Don't make me laugh. With low efficiency and woefully dismal storage this option is doomed to failure. Where the difference in energy production will come is natural gas. Which, while not as dirty as coal, is still much more dangerous for the environment than nuclear power. If you support burning natural gas and fracking close nuclear plants. If you want a truly green energy production method, support nuclear.
