General Comment

The half-life of Plutonium 239 is 24,100 years. It will decay to complete safety in 2,410,000 years. The half-life of U-235 is 700 million years. This is a no-brainer. Even 1,000 years is reckless. The waste has to go. San Onofre has 26% of the stranded nuclear waste in the entire country.
