General Comment

Current nuclear power is the safest form of energy out there. The new advanced reactors have nearly non-credible accident probabilities. If the main role of the NRC is to protect the public, the assesment and licensing of these new reactors should go smoothly and quickly. I hope for the sake of our clean energy future that this will happen. Delaying of reactor builds due to regulatory over reach will cause more harm to the public than good.

I also hope to see no unnecessary addition of an EPZ when the likelihood of an offsite release which exceeds the EPA protective action guidelines is remote to non-credible. We don't add EPZs to oil refineries or hydro dams, which are much more likely to cause death and destruction; we should not have EPZs on nuclear plants, especially new ones.
