San Onofre

Storing nuclear waste next to a water source such as a large river risks spreading leaking radiation widely through the river and water table. More on point for San Onofre, storing nuclear waste at or near San Onofre, next to the Pacific Ocean (the largest in the world) and a large human population within 50 miles is INSANELY dangerous and irresponsible. Don't get me started on the earthquake faults under and very near the storage location at San Onofre.

Altogether, perhaps it would be more concise of me to sum it up by saying it would be a criminal act to set so many people up for the harm San Onofre's Fukushima's event will bring us.
