U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001

Dear US NRC, June 1, 2018

I know that now we have figured out that wind and solar can already replace nuclear power at less cost and less danger. It must have been a fantasy of mine, that TVA would finally come around to the new sustainable and renewable energy world. They have not.

Sad to say, they are back again, one more time, with nuclear power. TVA is already responsible for the disaster in Kingston, the massive coal ash flood, whose results include over 100 people dead and many others injured, due to a haphazard cleanup.

I wonder what amount of nerve Mr. Johnson and his assistants have to introduce another potential for danger to Kingston and the state of Tennessee. It is shameful for them to disavow all responsibility for dead people from the Kingston Cleanup. TVA started the disaster. Please get data on it for your decision.

The originators of the Kingston disaster should not be trusted with another dangerous project. Small modular reactors still leave us with radioactive waste. It can not go AWAY.

Treat TVA as grownups who refuse to accept responsibility for the Kingston coal disaster. I hold them responsible for the deaths of so many in the Kingston coal ash disaster.

TVA which who treats people as if they can be just thrown away, should not be entrusted with any more dangerous technology, especially since small modular reactors are totally unnecessary.

Would you trust TVA with a small modular reactor in your town? Use common sense, not just legality. JUST SAY NO.

I can not get to Kingston for the hearing due to health problems,

but I hope you can still put this note into the record.

Thank you,

Nancy McFadden
