Docket 72-11

RANCHO SECO ISFSI FINAL SAFETY ANALYSIS REPORT UPDATE

Attention: William Allen

This letter serves as the 24-month update of the Final Safety Analysis Report (FSAR) for the Rancho Seco Independent Spent Fuel Storage Installation (ISFSI) as required by 10 CFR 72.70(c)(6).

On June 29, 2016, Revision 5 to the Rancho Seco ISFSI FSAR was submitted. Since the date of the last Final Safety Analysis Report update (6/29/16), two changes have occurred at the facility that required the ISFSI SAR to be updated.

- ISFSI SAR, Revision 6 was completed to correct errors in Footers, Table of Content, List of Effective Pages, and Page and Section numbers that were identified while preparing a consolidated ISFSI SAR for submittal to the NRC in support of the AREVA/WCS Consolidated Interim Storage ISFSI Application.
- ISFSI SAR, Revision 7 incorporates the requirements of SNM-2510, Amendment 4 which was approved by the NRC on November 24, 2017. This amendment allows the continued use of a radioactive check source originally incorporated into the Part 50 license under the Part 72 license. This action was requested by SMUD to allow termination of the Part 50 license. The proposed changes to the ISFSI SAR in Revision 7 were reviewed and approved by the NRC in association with License Amendment 4.
- No safety evaluations performed in accordance with 10 CFR 72.48 identified the need to update the ISFSI FSAR.

NM5526

- No analyses performed by the Commission have identified the need to update the ISFSI FSAR.
- No change to the facility has occurred that requires the ISFSI FSAR to be updated.

By signature below, the Sacramento Municipal Utility District certifies that the above is true and correct. If you, or members of your staff, have questions requiring additional information or clarification you may contact me at (916) 732-4893.

Sincerely,

A handwritten signature in black ink, appearing to read "Dan A. Tallman", written over a horizontal line.

Dan A. Tallman
