Christine,

I was able to speak to our staff in Kentucky. They are not aware of any new mussel resources in the vicinity of your project area so the only new information for the project would be the listing of the rabbitsfoot mussel and critical habitat designation which you already have in your document. You describe the shovelnose sturgeon as federally listed on page 41. While it is listed due to Similarity of Appearance that rule does not apply to the Ohio River where the project is located.

We look forward to reviewing the final EA.

Thanks,

Matt Mangan

Hi Matt,

Just checking in with you. Have you and/or your contact in the KY office had a chance to look over the information I sent regarding T/E species?

Thanks,

Christine

Subject: Encrypt! for review - information about T/E species for draft EA for proposed Honeywell license renewal

Hello Matt,

Attached are two files: 1) A Word file containing information about the proposed Honeywell license renewal, Honeywell operations, and potential impacts on the natural environment; and 2) a figure showing the location of wetlands on the Honeywell site. As we discussed on the phone, could you please review these and let me know if you have any concerns about our discussion and conclusions. I would appreciate it if you could share this with your contact in Kentucky, as you had mentioned. Or, if you prefer, I can send this to him/her separately.

Please let me know if you were able to open this email and the attachments (i.e., they came through encrypted and you were able to open them using the HTML link).

Thanks in advance for your review and feedback. Please call me if you need more information or would like to discuss anything. Today I can be reached at 410-295-0561.

Thank you,

Christine
