SUBJECT

Request for Information (License No. 13-35297-01, Docket No.: 030-38910)

SUMMARY

The inspector contacted the licensee to determine if the licensee had received licensed material yet and the licensee stated that licensed material was not received yet, and no principal activities were conducted. In addition, the licensee stated that the State of Indiana determined that the current facility was too small to conduct safe nuclear medicine procedures. As such, the licensee may expand the hospital to accommodate a nuclear medicine facility; however, it would take a while for that to happen.

The inspector briefed the Materials Inspection Branch (MIB) Chief and the Materials Licensing Branch (MLB) Chief regarding the information above.

ACTION REQUIRED

The MIB Chief asked the inspector to revise the Inspection Book to inform the MIB that the licensee needs to be periodically telephoned to determine if the licensee has begun the conduct of principal activities as per the memorandum dated June 15, 2017, titled, "Deviation from Initial Date for Licensee: Pinnacle Hospital".
