NRC-2016-0119

Dear NRC Staff,

I approve but I am concerned about TVA's early site permit application for small modular reactors at the Clinch River Site in Tennessee. . The NRC should evaluate the costs of SMRs in comparison to other energy choices, such as wind and solar, including energy efficiency and conservation. SAFE reactors and standarization for rapid manufacture should be the goal here. Fossil fuels need to be replaced at a much faster pace than is currently happening. Solar Wind and Nuclear installations should all be put on a faster track.

A comparison of the impacts on our water resources, including water quality and water supply of both surface and groundwater, should also be done by the NRC for SMRs and these other energy choices.

Thank you.

Sincerely,
Lee GRUBER
