Dear NRC staff,

I am deeply concerned about the proposed siting of experimental Small Modular Reactors (SMRs) at the Clinch River site in Oak Ridge, Tennessee. The Tennessee Valley Authority (TVA) is seeking an early site permit (ESP) to construct two or more reactors, with up to 800 megawatts (MW) of electricity generation capacity. I have no confidence in the Draft Environmental Impact Statement, fearing it is biased and limited in its views. I know there are alternatives to this proposed system and urge that such be more fully addressed. I believe too that the energy need for such a system as proposed could be more adequately addressed. Please do a review that is genuinely unbiased, reviews all alternatives, including renewable energy, and holds an adequate assessment of energy needs.
