General Comment

To Whom this May Concern,

The Alliance for a Green Economy has informed me that the NRC is thinking about allowing nuclear power plants in the U.S. to experiment with new fuel pellets and fuel rods without the NRC's review and approval, and without any entity having a chance to agree or disagree with the experiments.

I'm opposed to any nuclear plant being allowed to do unapproved and unreviewed experiments with new kinds of fuel in my own backyard. This is a very disturbing trend --one that aims to lower the costs of running a nuclear plant and completely disregards the need for oversight and safety.

Sincerely,
