General Comment

Please do not allow the implementation 2 new designs for nuclear nuclear power plant fuel rods without careful testing and study to determine what if any unanticipated problems may occur from untested new designs. It just doesn't make any sense to move ahead, build and install the new designs, and then "hope" nothing unexpected happens when it comes time to refuel.

Unfortunately, many nuclear power plants are in heavily populated areas. The NRC owes it to that population to provide the safest possible, fully tested, replacement fuel rods for all nuclear reactors. Steve Hopkins
