General Comment

I strongly object to the regulatory positions described in Regulatory Path 1. This represents an industry-wide amendment to the technical specifications. The public is being totally cut out of the regulatory process and opportunity for hearings. The NRC Office of the Inspector General should investigate NRC collusion with the industry and make publicly available all closed meetings between NRC, industry and industry organizations. Additionally, all "drop-in" meetings between NRC Commissioners and senior executive service (SES) that are not open to the public should cease immediately.
